WORK AUTHORIZATION

Malaysian national holding Taiwan **APRC** (Alien Permanent Resident Certificate). Under Article 51 of the Employment Service Act, work authorization is self-held — **no employer work-permit sponsorship required.**

EDUCATION

National Taitung University
B.A., Information Management
Sep 2012 – Jun 2016

CORE SKILLS

Backend

- PHP / Laravel
- Python / FastAPI
- RESTful API
- MySQL / MariaDB
- MongoDB
- Redis
- JWT / SSO

Frontend

- TypeScript
- React / Next.js
- Vue 3 / Nuxt 3
- React Query

DevOps & QA

- Docker
- GCP / AWS
- Jenkins CI/CD
- Nginx
- Git
- PHPUnit
- Playwright

Architecture & Practices

- Clean Architecture
- DDD
- Design Patterns
- UML / C4 Model
- TDD
- Git Flow

LANGUAGES

English Intermediate
Malay Intermediate
Mandarin Chinese Working proficiency

Thomas Sak

Senior Backend Engineer | Targeting Full-Stack Engineer roles

Senior backend engineer with 8+ years of experience in system architecture and business-process design, currently based in Taipei, Taiwan. Specialized in identifying root-cause architectural issues and leading refactors across business validation, state-machine logic, and cross-system integration. Core stack is PHP/Laravel and Python/FastAPI, complemented by full-stack experience in Vue/React and DevOps. Recently designed and rolled out an AI-assisted development workflow — including feature maps, lightweight C4 documentation, and process controls — that lets AI collaborate reliably on existing codebases, and shares these practices through technical articles and internal talks.

EXPERIENCE

Backend Engineer Jun 2026 – Present
104 Corporation — leading job-recruitment platform in Taiwan (500+ employees) · Xindian Dist., New Taipei City

Senior Backend Engineer Nov 2023 – Jun 2026 (2 yrs 8 mos)
JS Adways — advertising, marketing & PR agency (30–100 employees) · Xinyi Dist., Taipei · Team lead (≤4 reports)

- Stack:** PHP/Laravel · TypeScript, Vue 3/Nuxt 3, React/Next.js · Python · MySQL, MongoDB, Redis · GCP, Docker, Jenkins CI/CD
- Designed and shipped a JWT-based SSO mechanism split into authentication and authorization per the AAA model, establishing a unified cross-system identity standard and reducing security risk from inconsistent per-system implementations.
 - Contributed to an internal Laravel SDK, owning automated Swagger API documentation generation and standardized request-validation rules to improve development consistency and maintainability.
 - Designed a Jenkins CI/CD pipeline that fully automated the build process, integrated Slack deployment notifications, and drove adoption of unit, API, and E2E test coverage.
 - Led an architecture refactor of the case-management system: restructured validation flows with the Template Method pattern to reduce coupling, and re-layered the frontend with Clean Architecture plus E2E tests to improve stability and extensibility.
 - Built an AI-assisted maintenance workflow for an existing frontend codebase — a feature map, lightweight C4 documentation, a ubiquitous-language glossary, and agent rules — to document feature entry points, data flow, and commit conventions, cutting repeated context-sharing and improving the reviewability of AI-assisted changes.

Senior Application System Engineer (Full-Stack) Jul 2018 – Nov 2023 (5 yrs 5 mos)
Link Station Taiwan (智林國際) — software & internet services · Neihu Dist., Taipei · Team lead (≤4 reports)

- Stack:** PHP/Laravel · JavaScript, Vue · Docker, Nginx
- Contributed to architecture design and database planning for a ticketing management system; implemented front- and back-office features and APIs supporting ticket operations and discount mechanisms.
 - Built a LINE LIFF ticket-purchase flow integrated with LINE Pay, including a ticket-splitting mechanism and third-party login via Google/Facebook.
 - Led the migration from Vue 2 to Vue 3, restructuring the project and purchase flow and improving the seat-adjacency algorithm and overall user experience.
 - Developed an Ibon and on-site box-office ticketing system, owning system architecture and database design, and integrating physical hardware and EasyCard payment APIs.

PHP Engineer Sep 2016 – Apr 2018 (1 yr 8 mos)
DaHong Information Co., Ltd. — internet services · Taiwan

- Stack:** PHP · JavaScript · MySQL
- Maintained and extended e-commerce platform features, including promotion configuration and shopping-cart discount logic, in support of marketing campaigns.
 - Built a data-collection crawler system, handling data processing, storage, and ongoing operations.

WRITING & TALKS

Laravel Reflection-based Validation Architecture — internal architecture design review on a reflection-driven, auto-discoverable validation framework for Laravel.

Encapsulating useMutation with the Pipeline Pattern — building a highly extensible React data layer with React, TypeScript, and TanStack Query.
